

The 5G Verdict: What Really Happened to Wavecon's Business

Impact of 5G Rollout on Revenue, Market Share & Plan Performance ·
January – September 2022 · Prepared for Wavecon Leadership Team

CONTEXT

From 3G/4G to 5G: A Nine-Month Transformation

Wavecon holds ~20% share in a competitive, customer-focused telecom market.

Each phase marks a distinct shift in network capability and customer behavior — setting the stage for the 5G performance analysis.

EXECUTIVE SUMMARY

5G Delivered Higher Spend, Not Higher Revenue

-0.5%

Revenue Change

Nearly flat post-launch despite 5G investment

+11.05%

ARPU Growth

Customers spending more per connection

-8.28%

Active Users

Base shrinking despite higher per-user value

+23.5%

Churn Rate

Retention is the real battle

 **Recommendation:** Double down on winning 5G plans; redesign/retire underperformers (P5, P6, P7).

Why Flat Revenue Masks a Bigger Story

Recommendation: Identify cities with largest user decline and launch targeted retention offers for 5G switchers, Prioritize network investment in bottom-5 ARPU cities

ARPU +11.05%

Higher spend per user — successful premium migration

Users -8.28% · Churn +23.5%

User loss offset almost all ARPU gains

Priority

Retention and coverage expansion in highest-churn cities

Transition disruption and promotional pricing (discounts) likely compounded the effect.

Four Metrics, One Underlying Tension: Value vs. Volume

Revenue

₹15.97B → ₹15.89B — nearly flat

ARPU +11.05%

Successful migration toward higher-value plans

TUsU (Churn) +23.5%

Signals price sensitivity or early network dissatisfaction

TAU (Active Users) -8.28%

Coverage gaps, device compatibility, or competitor migration

Net effect: Wavecon is monetizing loyal users better, but losing the edges of its base.

A 3-Point Share Drop Right After Launch

Key Findings

- Average share of **19.5%** across the period, but trending down since 5G launch
- Share fell from **20.97%** (March) to **17.84%** (September) — a 3.13-point drop
- Coincides with an aggressive competitor acquisition push
- Weak competitive positioning of Britel_Ms in certain cities

Recommendation: Target cities where Britel_Ms share weakened with SIM-porting campaigns and device-upgrade offers.

Three Plans Drive Growth, Two Are Dragging It Down

Winners

- **P1, P2, P3** — Revenue engine, 30% of total revenue combined
- **P11 & P12** — Flagship 5G plans, already 10% of revenue in just 4 months of adoption

Decliners

- **P5 & P6** — Down ~34% as legacy combos lose relevance to standard 5G value
- **P7** — Down 73% — mid-tier fixed-data plan losing to unlimited 5G offers

Discontinue the Drag, Redesign the Middle, Scale the Flagships

Discontinue

P5 & P7 — Legacy value propositions
5G has made obsolete

Redesign

P4 (add 5G data caps) and **P6** (bundle
streaming with speed cap)

Scale & Promote

Redirect marketing spend to **P1, P2, P3** and flagship 5G plans **P11/P12**

Precedent: P8, P9, P10 were already successfully sunset in favor of P11, P12, P13.

Growth Is Concentrated — So Is the Risk

City Patterns

- **Top 5 cities** generate ~60% of revenue but face active-user declines and increase in churn
- **Premiumization cities** show fewer users but more revenue per user
- **Pune & Chennai** show falling ARPU despite user growth — likely discount-driven, entry-tier adoption

Four Moves to Convert 5G Investment into Growth

Retain

Launch targeted 5G retention offers in highest-churn top-5 cities

Rationalize

Discontinue P5/P7, redesign P4/P6, retire underperforming city discounts

Reinvest

Prioritize network investment in bottom-5 ARPU cities

Recover

Upsell price-sensitive new users (e.g., P13 base) into P11/P12 flagship plans
